Critical Thinking and Decision-Making for Administrative Professionals

**TEACHING ASSISTANTS TO THINK CRITICALLY, FORMULATE
INTELLIGENT INFERENCES AND MAKE SUPERIOR DECISIONS**

More than at anytime in the past, administrative professionals today face many additional challenges and choices that demand exceptional critical thinking and decision-making capabilities. Critical thinking skills can bring about an immensely positive change in your life. It is no exaggeration to say that the quality of your life depends in large measure on the quality of the decisions you make. In today's competitive environment, the ability to think logically and make decisions rationally and intelligently is no longer an option - it's an imperative!

September 12th, 2023

A live virtual one-day seminar, personally personally conducted by Dr. Paul A. Douglas, author of '*Critical Thinking and Rational Decision-Making for Administrative Professionals.*'

“

This course was amazing. Dr. Douglas was enthusiastic and grounded. I have been to many training courses but I have to say this was the best one."

COURSE FRAMEWORK

CRITICAL THINKING: AN ESSENTIAL SKILL FOR ADMINS

At this course you will discover not just what critical thinking is but also why it is so vitally important to both your professional and personal growth. Critical and rational thinking is a discipline and a skill—one that will allow you to make decisions that are the product of rational thought. Critical thinking will enable you to think at the highest level you are capable of. Becoming a critical thinker will enhance your ability to make better decisions and create better solutions

- What is critical or rational thinking
- Why improving your critical thinking skills is so vitally important
- Defining critical thinking, reasoning, and logic
- Developing intellectual self-defense
- How to think clearly, identify fallacies and construct effective arguments
- Distinguish between “Automatic” thinking and “Manual” thinking
- Immunize yourself against the influence of bad arguments, propaganda and psychological manipulation
- Skills for becoming a more penetrating thinker - so as to rationally persuade others
- Explore key concepts in logical and critical thinking
- Developing an understanding of the 'Elements of Thought,' and identifying how these parts work together in reasoning.
- Identify obstacles to logical and critical thinking

THE ROLE OF LOGIC IN RATIONAL THINKING

Understanding the principles of logic, enables you to evaluate arguments and to better distinguish between good and bad reasoning, between truth and falsehood. By developing a grasp of formal and informal logic, you will improve your ability to evaluate ideas or claims others propose, make good decisions, and form sound judgments. The ability to discern a valid argument from a false one is an important skill and a key aspect of critical thinking.

- The origins and importance of Logical Thinking
- The power and beauty of Socrates's categorical syllogism
- Arguments: What they are and how to recognize them
- What Michael Palin can teach us about the argument
- The journey from Premises to Conclusions
- Identifying the components of a good argument
- Evaluating logical arguments based on criteria such as validity, strength and cogency
- The Importance of Logical Thinking in the Workplace
- Recognizing and producing arguments in standard form
- Using deductive and non-deductive arguments
- How the syllogism has changed the world
- Understanding the difference between the categorical syllogism, the disjunctive syllogism and the hypothetical syllogism
- Why you need to recognize the most common errors in formal logic - affirming the consequence and denying the antecedent
- Recognizing the difference between Modus Ponens and Modus Tollens
- Bertrand Russell and the 'excluded middle'

INFORMAL LOGIC: IDENTIFYING AND REFUTING FALLACIES

Logical fallacies are statements that seem to be true until you apply the rules of logic to them. Logical fallacies are often used to mislead you – to trick you into believing something you otherwise would not. If you're taken in by a logical fallacy, the false conclusions they lead to can result in decisions you make being later regretted. Logical fallacies are examples of informal logic and are common. In this important module you will learn to identify and refute many logical fallacies, including the following:

- The 'Ad Hominem fallacy' which literally means literally means 'to the man.' it is where you are attacked personally, instead of your arguments
- The 'Tu Quoque fallacy' - an invalid attempt to discredit your argument by answering criticism with criticism -- without presenting a counterargument
- The 'Straw Man fallacy' is when your opponent oversimplifies or misrepresents your argument (i.e., setting up a "straw man") to make it easier to attack
- The 'False Dilemma Fallacy' misleads by presenting complex issues in terms of simply two inherently opposed sides. I
- The 'Poisoning the Well fallacy' occurs when negative information that is irrelevant is presented ahead of time to discredit your argument. Poisoning the well represents a preemptive ad hominem attack against you
- 'Post Hoc Ergo Propter Hoc,' this fallacy is committed when an argument claims that because one event followed another, it was caused by or analogous to it
- The 'Equivocation fallacy' occurs when the context is an argument and the conclusion depends on shifting the meaning of an expression while treating it as if it remains the same
- 'Appeal to Authority,' this fallacy insists that a claim is true simply because a valid authority or expert on the issue said it was true, without any other supporting evidence
- The 'Appeal to False Authority fallacy,' uses an alleged or an unidentified as evidence in your opponent's argument
- 'Argumentum ad Ignorantiam,' this fallacy occurs when you argue that your conclusion must be true, because there is no evidence against it. This fallacy wrongly shifts the burden of proof away from the one making the claim
- 'Red Herring,' In this fallacy your opponent redirects the argument to another issue to which they can better respond to
- 'Confirmation bias,' is the tendency to search for, interpret, favor, and recall information in a way that confirms or supports one's prior beliefs or values and ignores contrary information
- The 'Begging the Question fallacy,' is any form of argument where the conclusion is assumed in one of the premises.
- The Galileo fallacy,' claims that because an idea is forbidden, detested, prosecuted or otherwise mocked, it must be true, or at least it should be given credibility.
- 'If by Whisky,' speaks to a situation where an individual's response to a question is contingent on the questioner's opinions and makes use of words that appear to support both sides of an issue
- The 'No True Scotsman,' is where a universal ("all", "every", etc.) claim is refuted, rather than conceding the point or meaningfully revising the claim
- 'Unfalsifiability,' is an important fallacy that we need to identify and refute. It is the assertion that a theory or hypothesis is true or false even though that theory or hypothesis cannot possibly be contradicted

PROBLEM SOLVING AND DECISION MAKING SKILLS FOR ADMINS

Critical thinking skills can bring about an immensely positive change in your life. It is no exaggeration to say that the quality of your life depends in large measure on the quality of the decisions you make. In today's competitive environment, the ability to think logically and make decisions rationally and intelligently is no longer an option - it's an imperative!

- Avoid and reduce common decision errors through awareness and simple strategies
- Not allowing emotion to sidetrack and hinder your decision making
- Learn the 6 steps to follow for every problem you solve or decision you make
- Develop competence in anticipating and preventing problems before they occur
- How effective problem-solving techniques can diffuse defensive behaviors and get people on common ground
- Learn how connected decisions capture reusable knowledge so as to improve your capabilities over time
- Build skills and judgment that can be applied to improve daily choices
- Utilize your newly acquired critical thinking and decision-making skills to increase your influence
- Why improving your critical thinking skills is so vitally important
- Defining critical thinking, reasoning, and logic
- Developing intellectual self-defense
- Distinguish between 'automatic thinking' and 'manual thinking'
- Immunize yourself against the influence of bad arguments, propaganda and psychological obstacles to logical and critical thinking
- Approach problem-solving in a coherent and systematic way
- Not allowing emotion to sidetrack and hinder your decision making
- Recognize the pitfalls of problem-solving and steps for avoiding them
- Utilize the 'IDEAL' problem-solving model to ensure you are solving the right problem
- Discover the power of 'Reverse Brainstorming.'
- Knowing how emotions can help—and hinder—your decision-making.
- Distinguish between automatic thinking and manual thinking
- Develop competence in anticipating and preventing problems before they occur
- How effective problem-solving techniques can diffuse defensive behaviors and get people on common ground.
- Utilize your newly acquired critical thinking and problem-solving skills to increase your influence
- Assess your current decision-making skills and develop plan to improve performance.
- Develop new insights into how to make intuitive decisions.
- Distinguish between problem-solving and decision-making
- Understand the impact of over-confidence in decision-making
- Avoid the common pitfalls that can derail your decision-making

PROVEN TRAINING FOR ADMINISTRATIVE PROFESSIONALS

Critical Thinking for the 'New Normal'

A number of recent studies have identified critical thinking as the number one requirement for success in the twenty-first century, yet there is also growing evidence that many administrative professionals lack this quality.

Today's administrative professional faces many situations that require extraordinary critical thinking and decision-making skills. This comprehensive one-day, workshop teaches those engaged in administrative and operations roles how to think logically and systematically about problems and situations and identify the optimal course of action.

The ability to think critically is one of the most important skills the administrative professional can develop. At the ***Critical Thinking and Decision-Making for Administrative Professionals Course*** you'll learn how to make better decisions, challenge logical fallacies and achieve greater results in less time by applying powerful problem-solving skills.

Learn to Think Better

Critical thinking is a competency you will use every hour of your day. As an administrative professional, you are the one that team members and clients come to with questions or problems. You must be able to handle a variety of challenges calmly and solve them using critical thinking

We make decisions everyday that affect our lives in both a personal and a professional context. The significance and the necessity of having the ability to make good decision making cannot be over emphasized. Critical thinking helps us to find any flaw, if it exists, in our decision making process thereby enabling us to reach a better outcome by eliminating those flaws. In short, regardless of what you are hoping to achieve, you need to expand your skills in logic; to be able to think critically and act quickly.

Whether you are an administrative assistant, executive assistant or you lead a team, by developing your critical thinking skills you will perform at a higher level and provide your organization with a distinct competitive advantage.
